

The Multiday Momentum Strategy is a mid-frequency strategy that predicts the market sentiment and momentum of major equity index futures and ETFs. The strategy include multiple sub-algorithms with a generic concept for the signal generation. By leveraging FinYX Quants HFT infrastructure and proven track record, the strategy seeks to generate positive absolute returns with minimal correlation to the market benchmark. By combining ETFs Market Neutral strategy within the Multiday Momentum Strategy, we significantly improve the returns, reduce the risk and increase the diversification.

### DISCLAIMER - PAST PERFORMANCE IS NOT NECESSARILY INDICATIVE OF FUTURES OR SECURITIES RESULTS

(2) The figures presented in table 2 are calculated for the entire period presented in table 1 (May 2018- onwards).  
 (3) S&P500 figures are taken from investing.com. HFRX Global Hedge fund index is designed to be representative of the overall composition of the hedge fund universe, HFRX Global Hedge Fund index figures are taken from <https://www.hfr.com/family-indices/hfrx/>. (4) The Allocation chart elaborates the assets generally included in the Multiday Momentum trading program and doesn't reflect current or representative portfolio. (5) The rankings are based on BarclayHedge. Rankings are nominated based on quantitative data provided by BarclayHedge for the various award categories. All data is collected and analyzed by BarclayHedge. Performance Awards are only available to BarclayHedge members.

**ACKNOWLEDGEMENT OF RISKS ASSOCIATED WITH INVESTMENT TRADING, LACK OF GUARANTEE BY FinYX FUND.** Information in this document is intended for use by professional investors only, as defined by MiFID II, US investors should be QEPs and shall not be forwarded to any unauthorized parties. You are aware of the speculative nature and the high risk associated with investment trading (which includes the risk that you may incur trading losses up to the aggregate amount in your account). You also acknowledge that no one can guarantee profit or freedom from loss in investment trading. FinYX, therefore, cannot and does not imply or guarantee that you will make a profit and it is explicitly agreed that you will be fully responsible for any trading losses in your account. Leverage or margin allows traders to take a position worth many times the account value with a relatively small amount of money. The results of trading with leverage or margin are that a small change in the market price may cause substantial gains or losses, proportional to the size of the money in your account in a short period of time. Therefore, you should not invest money that you cannot afford to lose. You should be aware of all the risks associated with trading and seek advice from an independent financial advisor if you have any doubts. Investing and trading in commodity interests and securities involves substantial loss, and thus is not appropriate for all investors. The investment value can both increase and decrease and the investors may lose all their invested capital.

**PERFORMANCE DISCLAIMERS- FinYX Fund performance is presented net of all commissions, fees and expenses and is not representative of all reasonably comparable accounts. ACTUAL RETURNS OF SMAs MAY VARY DUE TO FACTORS SUCH AS ACCOUNT SIZE, FEES AND EXECUTION PRICES.** Simulations and past performance shall not be a reliable indicator of future performance. Starting from July 2023 Multiday Momentum trading program is offered by FinYX (Cyprus) Investments Ltd. ("FinYX Cyprus"). The presented performance until 7/2022 is hypothetical. The performance assumes that the returns were compounded. The performance of the account has been pro forma adjusted to account the maximum management and incentive fees to be charged to separately managed accounts ("SMAs") participating in the Strategy. Starting from 7/2022 and until November 2022 the performance is a composite presentation of all the SMAs participating in the trading program in Futures **only** together with the hypothetical performance of the ETFs. The performance assumes that the returns were compounded. Starting from December 2022 and until March 2023 the performance is live futures and ETFs trading in a proprietary account of the parent company of FinYX Cyprus in the size of \$1M and of the performance of a composite presentation of all the SMAs participating in the trading program. The performance assumes that the returns were compounded. FinYX Cyprus may occasionally reduce the leverage used to trade accounts, because of its own discretion or at a client's request. Therefore, the amount of leverage used to trade these accounts varied. Because FinYX Cyprus has not placed identical trades and used identical leverage in all accounts that have been traded pursuant to the Strategy, the performance does not reflect the actual performance of any one specific SMA included in the composite presentation. However, FinYX Cyprus believes that the rates of return included in the composite presentation are generally reflective of the overall performance of the trading program. Starting from April 2023 the results are the audited results of a segregated portfolio known as the FinYX Futures Multiday Momentum Strategy S.P operating under the commodity pool known as FinYX Fund. The performance of the FinYX Futures Multiday Momentum Strategy SP not only includes management and performance fees charged at the SP level, but also certain Fund level fees and expenses, such as operating and legal expenses. In addition, in certain instances, the trading account maintained by the FinYX Futures Multiday Momentum Strategy SP did not receive the identical positions as SMAs participating in the trading program. This was due to certain order entry procedures followed by FinYX Cyprus. Therefore, the performance is not necessarily representative of how any one specific SMA would have performed since April of 2023. However, FinYX Cyprus believes that the performance is most representative of how the Strategy performed since April of 2023.

**GENERAL-**This document contains information which is subject to change without notice. Neither FinYX FUND, nor any other related party undertakes any responsibility for its accuracy and completeness. The term Drawdown means losses experienced by a pool or account over a specified period expressed as a percentage of the pool's net asset value. The assets under management include an account of which one of FinYX's principals is a 50% owner. Under certain CFTC regulations, this account is considered a proprietary account. As of the date of this presentation, the value of this account was \$2M in Multiday Momentum program. This material is being provided for information and discussion purposes only and is qualified in its entirety by the information included in the confidential offering documents and supplements (collectively, the "Memorandum") of FinYX Fund described herein, and is not intended to be, nor should it be construed or used as investment, tax or legal advice or an offer to sell, or a solicitation of an offer to buy, an interest in the Fund. Any offer or solicitation of an investment in the Fund may be made only by delivery of the Memorandum to Accredited Investors and Qualified Eligible Person. Before making any investment in the Fund, you should thoroughly review the Memorandum with your professional advisor(s) to determine whether an investment in a Fund is suitable for you considering your investment objectives and financial situation. The Memorandum contains important information concerning risk factors, including a more comprehensive description of the risks and other material aspects of an investment in the Fund, and should be read carefully before any decision to invest is made.

Hypothetical performance results -have many inherent limitations, some of which are described below. no representation is being made that any account will or is likely to achieve profits or losses similar to those shown. in fact, there are frequently sharp differences between hypothetical performance results and the actual results subsequently achieved by any particular trading program. one of the limitations of hypothetical performance results is that they are generally prepared with the benefit of hindsight. in addition, hypothetical trading does not involve financial risk, and no hypothetical trading record can completely account for the impact of financial risk in actual trading. for example, the ability to withstand losses or to adhere to a particular trading program in spite of trading losses are material points which can also adversely affect actual trading results. there are numerous other factors related to the markets in general or to the implementation of any specific trading program which cannot be fully accounted for in the preparation of hypothetical performance results and all of which can adversely affect actual trading results.
